

Natalija Glisovic - Industrial PhD Student & Data Scientist

natalija.glisovic@hotmail.com | +46736508618

Profile

I am a researcher and Data Scientist with over four years experience working in e-commerce to better understand and predict customer behaviour. I am currently completing my PhD where my research focuses on recommender systems, exploring multimodal integration to better address data sparsity.

Experience

Industrial PhD Student <i>KTH Royal Institute of Technology</i>	Malmö/Stockholm 2024 - Present
---	--

- Published research in both journals and conferences on context-aware recommender systems incorporating text and image data
- Designed and trained transformers using **PyTorch**, used LLMs (**Gemini**) for creating synthetic data creation, and implemented multimodal embeddings (**CLIP, DiNOV2, sentence-transformers**)
- Present finding at academic conferences and company meetings to diverse technical audiences

Data Scientist <i>IKEA (Ingka Group Digital)</i>	Malmö 2022 - Present
--	--------------------------------

- Internship focusing on modelling stock availability in the US market and master thesis work on creating a predictive model for customer lifetime value
- Developed ML pipelines and dashboards using **SQL, python, Google Cloud Platform** and **Looker Studio** for data exploration and insights
- Collaborated with product and engineering teams on end-to-end project delivery
- Established baseline models for IKEA Family Rewards program to measure impact and present insights to product and country teams

Master Thesis <i>IKEA (Ingka Group Digital)</i>	Malmö 2022
---	----------------------

- Developed a predictive model for customer lifetime value using Random Forest focusing on click and retention data

Data Scientist Intern <i>IKEA (Ingka Group Digital)</i>	Malmö 2021
---	----------------------

- Analysed stock availability impact on US market through large-scale survey and predictive modelling based on survey using XGBoost

Student Data Scientist <i>Danish Refugee Council</i>	Copenhagen 2021
--	---------------------------

- Developed XGBoost forecasting model to predict mixed migration patterns
- Conducted data exploration and preprocessing using Jupyter notebooks, integrating and cleaning data sources

Education

University of Copenhagen <i>MSc Social Data Science</i>	Copenhagen 2020 – 2022
---	----------------------------------

University of Aberdeen <i>BSc Psychology</i>	Aberdeen 2016 – 2020
--	--------------------------------

Technical Skills

- Programming: Python, SQL
- Machine Learning: PyTorch, scikit-learn, NumPy, TensorFlow
- Cloud: Google Cloud Platform & BigQuery
